

# LibreOffice CONFERENCE INDONESIA

## Running The Latest LibreOffice with Docker Container

Samsul Ma'arif  
[samsul@dot-indonesia.com](mailto:samsul@dot-indonesia.com)

# Me ?

- Name : Samsul Ma'arif
- Born : Cilacap, 1989
- PtS : Turen, Kab. Malang, East Java
- Currently :
  - DevOps of DOT Indonesia
  - Infrastructure Team of BlankOn Linux Project
  - Member of KLiM

# Contents

- What is LibreOffice?
- What is Docker?
- How to run LibreOffice within Docker?
- Demo Time

# What is LibreOffice?

- ♦ Free and open source office suite, a project of The Document Foundation.
- ♦ Forked from OpenOffice.org in 2010, which was an open-sourced version of the earlier StarOffice.
- ♦ Word processing, spreadsheets, slideshows, diagrams and drawings, working with databases, and composing mathematical formulae.

# LibreOffice

# Virtualization Types

- Hardware Level
  - Full Virtualization: Oracle VirtualBox, VMWare Workstation, Qemu
  - Bare Metal Virtualization: RedHat KVM, Citrix Xen, VMWare Vsphere, Microsoft HyperV
- Operating System Level (OS Container): OpenVZ, LXC
- Application Level (Application Container): Docker, rkt

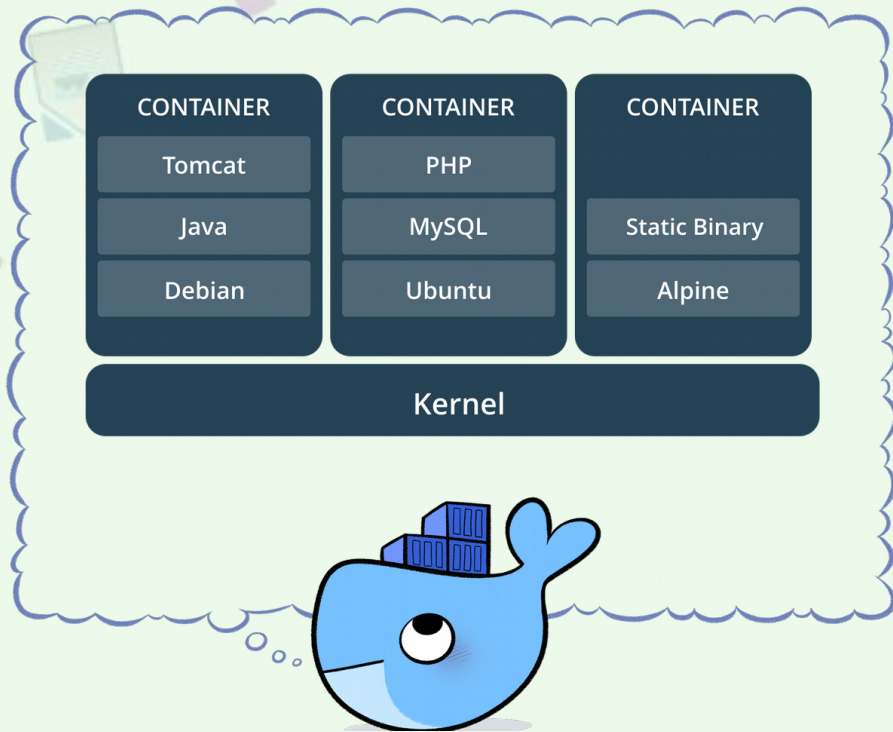

# What is ?

docker

- Docker is an open-source project that automates the deployment of applications inside software container
- Docker containers wrap up a piece of software in a complete file system that contains everything it needs to run: code, runtime, system tools, system libraries – anything you can install on **a server**.

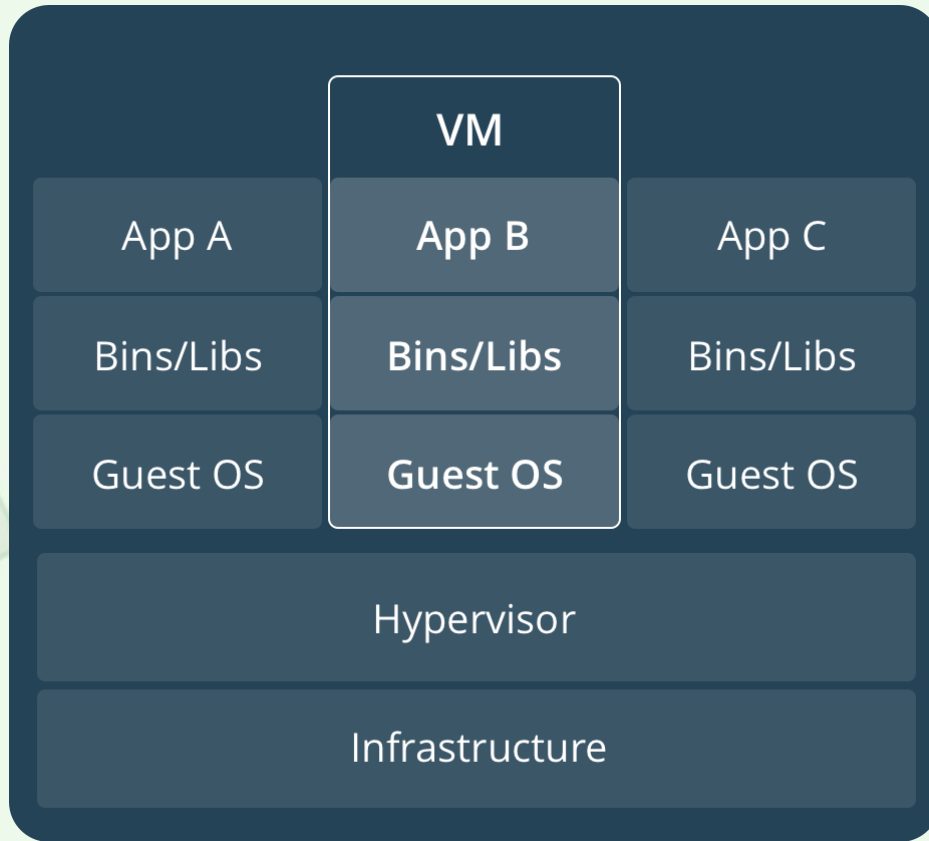

# Introduction to Container

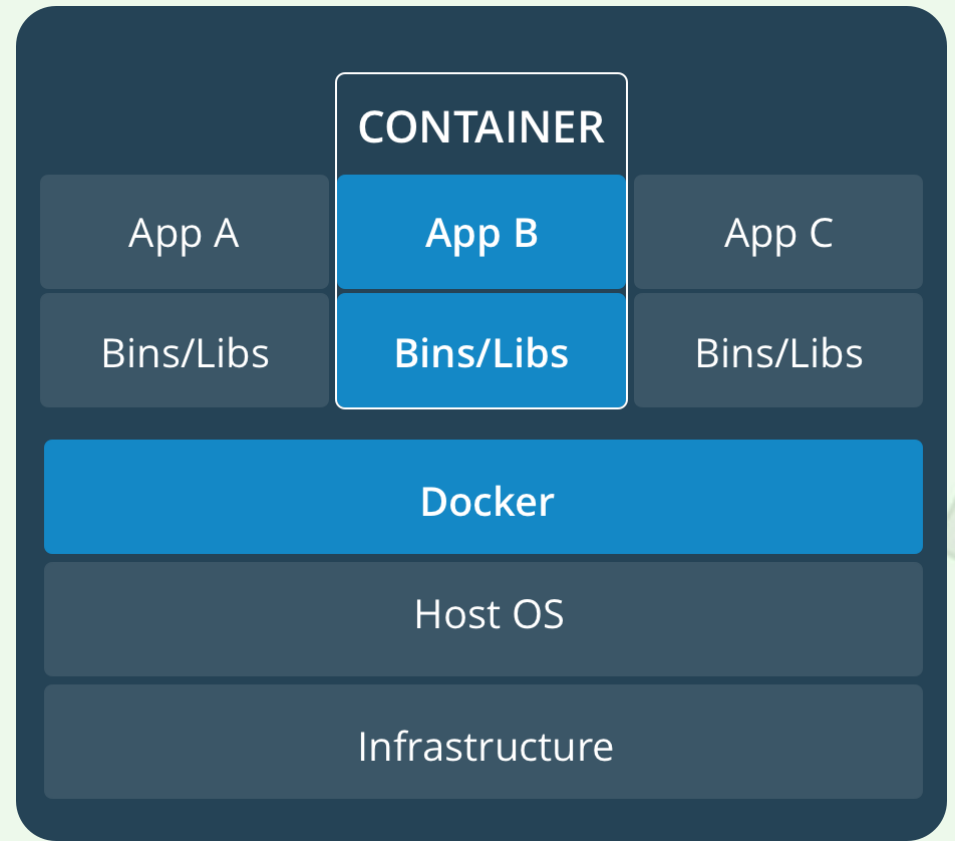

- Standardized packaging for software and dependencies
- Isolate apps from each other
- Share the same OS kernel
- Works with all major Linux and Windows Server

# Container vs VM

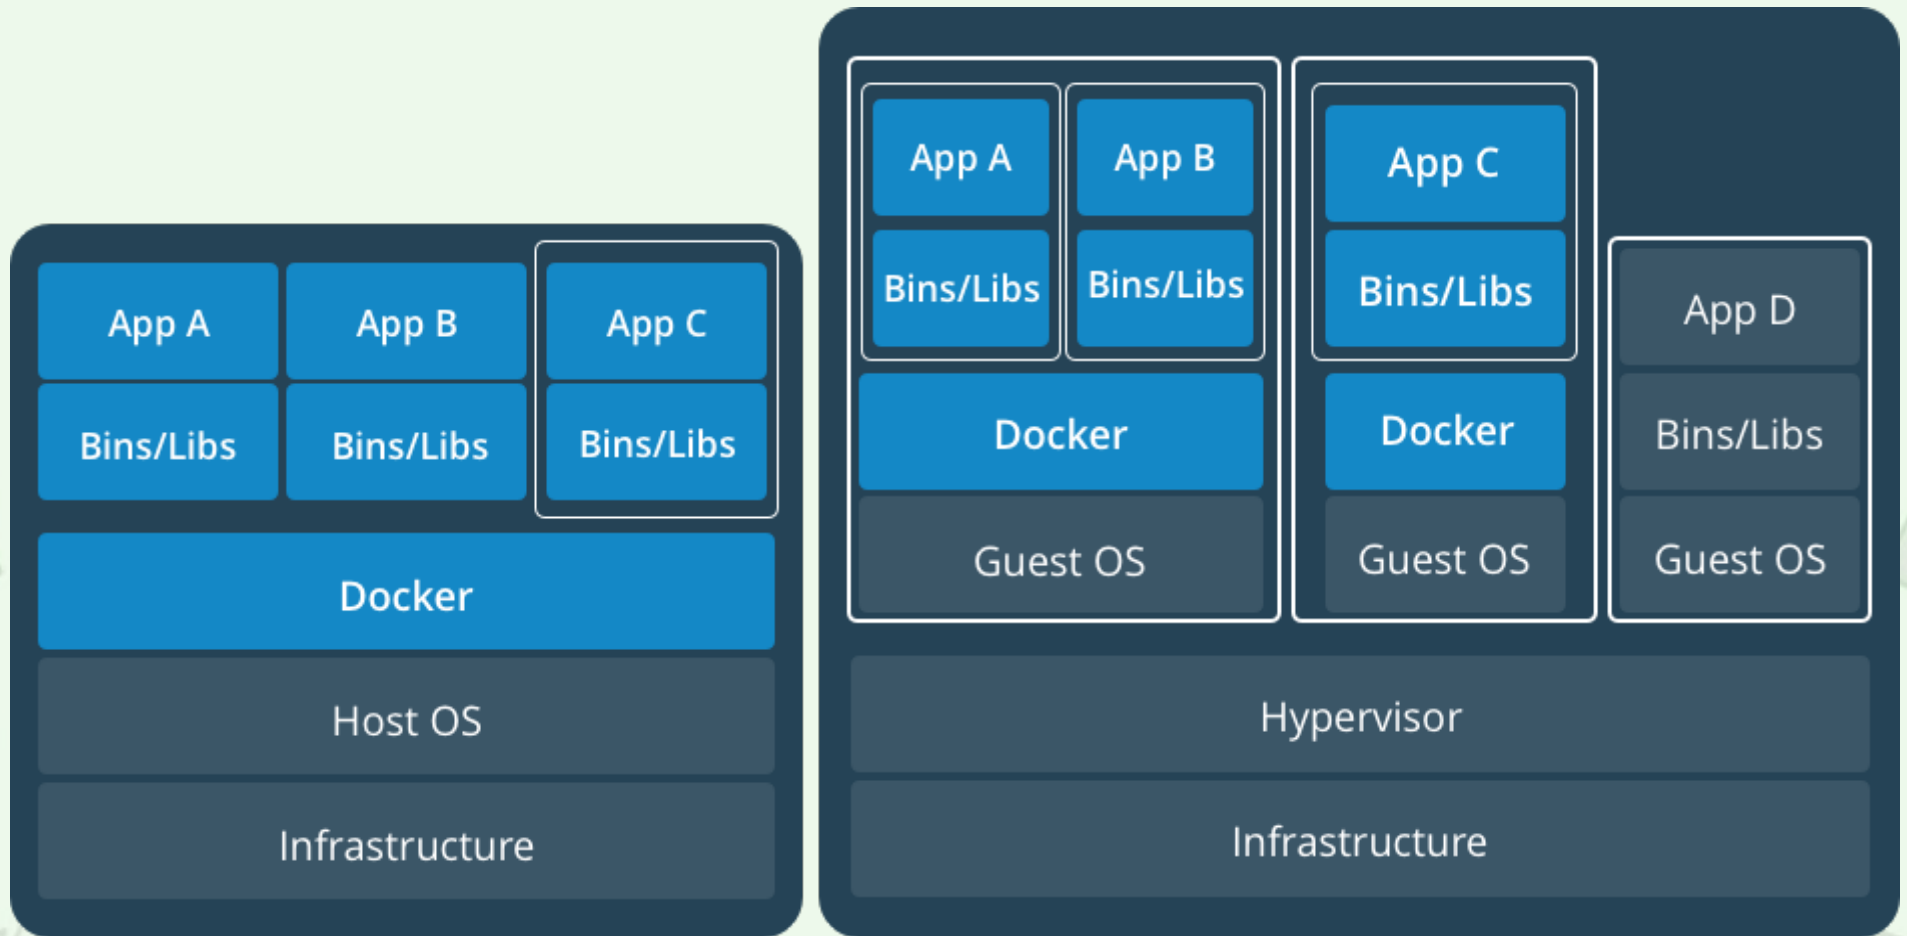

VMs are an infrastructure level construct to turn one machine into many servers

Containers are an app level construct

# Container & VM

Containers and VMs together provide a tremendous amount of flexibility for IT to optimally deploy and manage apps.

**docker**

**Yes we can!**

**How?**

# How to run LibreOffice within Docker?

- ♦ Install Docker
- ♦ Create Docker Image with Dockerfile
- ♦ Build the image
- ♦ Run it

Boni  
BlankOn Mascot

# Install Docker

```
sudo curl -sSL https://get.docker.io/ | sh
```

Boni  
BlankOn Mascot

# Dockerfile

```
$ sudo usermod -aG docker user
```

```
$ sudo apt install git
```

```
$ git clone https://github.com/samsulmaarif/docker-libreoffice.git
```

```
$ cd docker-libreoffice
```

```
$ ls
```

```
build.sh  Dockerfile  README.md  start-libreoffice.sh
```

# Build Docker Image

```
$ docker build -t samsulmaarif/docker-libreoffice .
```

**Note the dot (.)  
in the end of the line**

Boni  
BlankOn Mascot

# OR pull it from Docker Hub

```
$ docker pull samsulmaarif/docker-libreoffice
```

Boni  
BlankOn Mascot

# Run it

```
$ docker run -v $HOME/Documents:/home/libreoffice/Documents:rw \  
-v /tmp/.X11-unix:/tmp/.X11-unix \  
-e uid=$(id -u) \  
-e gid=$(id -g) \  
-e DISPLAY=unix$DISPLAY \  
--name libreoffice \  
samsulmaarif/docker-libreoffice
```
